

CLAIMS

We claim:

- 1 1. A cover for medical applications comprising:
2 a film having a predefined form, said film formed of a flexible, liquid impervious material,
3 said form defining at least one substantially circular opening;
4 a first resilient band attached to said film and disposed so as to encircle each of said at least
5 one circular opening;
6 a second resilient band attached to said film and disposed at a predetermined distance from
7 said first resilient band, so as to also encircle each of said at least one circular opening; and
8 an absorbent medium attached to said film, and disposed between said first and said second
9 resilient bands, so as to also encircle each of said at least one circular opening;
10 wherein upon placing said film over a medical application, each said first and second
11 resilient bands forming a substantially watertight seal against a skin surface, and said absorbent
12 medium absorbs any moisture that invades said film by passing said first band, and prevents the
13 moisture from passing said second band.

- 1 2. The cover according to claim 1, wherein said film is plastic.
- 1 3. The cover according to claim 1, wherein said film is adapted to protect a bandage.
- 1 4. The cover according to claim 1, wherein said film is adapted to protect a cast.

1 5. The cover according to claim 1, wherein said film is adapted to protect a body
2 portion selected from the group consisting of the head, an arm, a chest, waist, a leg, and a foot.

1 6. The cover according to claim 5, wherein said film is for a head.

1 7. The cover according to claim 5, wherein said film is for an arm.

1 8. The cover according to claim 5, wherein said film is for a chest.

1 9. The cover according to claim 5, wherein said film is for a waist.

1 10. The cover according to claim 5, wherein said film is for a leg.

1 11. The cover according to claim 5, wherein said film is for a foot encased in a cast.

1 12. A cover for medical applications comprising:

2 a film having a predefined form, said film formed of a flexible, liquid impervious material,
3 said form defining at least one substantially circular opening;

4 a resilient band attached to said film and disposed so as to encircle each of said at least one
5 circular opening; and

6 an absorbent medium attached to said film, and disposed adjacent to said resilient band, so
7 as to also encircle each of said at least one circular opening;

8 wherein upon placing said film over a medical application, each said resilient band forming
9 a substantially watertight seal against a skin surface, and said absorbent medium absorbs any
moisture that invades said film by passing said band, and prevents the moisture from entering said
film.

1 13. The cover according to claim 12, wherein said resilient band includes a first and
2 second substantially elastic bands, a said absorbent material is disposed between said first and
3 second substantially elastic bands.

1 14. The cover according to claim 12, wherein said absorbent material includes a first
2 layer for wicking moisture, and a second layer for entrapping the wicked moisture.

1 15. The cover according to claim 14, wherein said second layer includes a substance
2 that substantially entraps moisture, thereby preventing contamination of the medical application.

1 16. The cover according to claim 15, wherein said substance is a granulated moisture
2 absorbing medium.

1 17. The cover according to claim 15, wherein said substance is a gelatin moisture
2 absorbing medium.
